Mr Rodger Hames,
R & D Enterprises Australasia Pty. Ltd.
PO BOX 90
Somerville
VIC, 3912

3rd June, 2011

Dear Mr. Hames,

Toxikos reference: TL030611-MG

You have requested Toxikos to provide an opinion on the potential for human health risks posed by the use of 'VuPlex' on food contact surfaces. It is our understanding that the product is to be applied to the surfaces and wiped with a dry cloth until a film remains and that the product is applied to the surface up to 52 times per year.

R & D enterprises provided Toxikos with the constituents of the products, plus the results of analytical studies measuring residues of key constituents on common surfaces to which VuPlex is applied. Toxikos supplemented this with information and conducted a worst case safety assessment using conservative assumptions throughout the assessment.

It is in our opinion that the use of the product 'VuPlex' on food contact surfaces in accordance with the use instructions presents negligible health risks to the consumer. The basis for this opinion is detailed in a technical report which is separate to this letter¹.

Sincerely,

Mandi Godden M.App.Sci. (Toxicology)
